

# Chest Freezer

If your fridge freezer is over-packed, but you don't want a huge upright freezer, then a smaller chest freezer is your best option. Chest freezers come in a full range of sizes, so whether you need a little extra freezer space or a lot, your options are wide open. This 3.8 cubic feet unit chest freezer is on the smaller side of available choices, but it's just the right size for people living on their own, couples, or even small families.

If you want energy-efficient, you can rest assured that this fully insulated chest freezer will keep your food frozen at a fraction of the energy cost compared to other larger fridge and freezer units. As an added bonus, it is environmentally friendly with the type of refrigerant it uses. This free standing chest freezer uses a standard 120 volt plug that fits most American wall sockets, so you can put this chest freezer practically anywhere to instantly increase your frozen storage space.

## Technical Details:
